Dear Yelo Bank Recruitment Team,

I am writing to express my strong interest in the IT Business Analyst (Risk Modeling / Scoring Squad) position at Yelo Bank. With hands-on experience in credit scoring, decision engine rule design, and risk assessment at Embafinans, I am confident that my background aligns well with the requirements of this role.

At Embafinans, I designed 25+ cut-off rules within a 6-priority tiered decision framework, integrating data from multiple sources including ASAN services, AKB bureau, and SIMA. I configured scoring matrices, developed a hybrid scoring model combining external bureau scores with internal risk scores, and performed quantitative analysis on credit history data using natural logarithm-based normalization. Additionally, I monitored scoring model performance, optimized cut-off thresholds, controlled data quality of scoring inputs, and defined antifraud detection rules within the decision engine — all of which directly correspond to the core responsibilities of this position.

My technical foundation includes SQL, Python-based data analytics, REST API, SOAP/XML, and Swagger specifications, enabling me to bridge the gap between risk logic and technical implementation effectively. I hold a Bachelor of Science in Applied Mathematics from Baku State University and have 15+ years of overall IT experience across the banking sector.

I would welcome the opportunity to discuss how my skills and experience can contribute to Yelo Bank's risk modeling objectives. Thank you for your time and consideration.

Sincerely,

Zamir Jamalov
