

ZAMIR JAMALOV

IT Support Specialist | Fintech & Payment Systems

+994 55 207 7228 | jamalov.zamir@gmail.com | Baku, Azerbaijan

PROFESSIONAL SUMMARY

Results-driven IT Support Specialist with hands-on experience in merchant onboarding, API integration support, incident management, and back-office administration across fintech and e-commerce platforms. Proven ability to guide merchants through full technical integration lifecycles — from test environment setup and test case execution to production go-live. Strong foundation in networking essentials, log analysis, REST API troubleshooting, and payment processing workflows. Backed by 15+ years of engineering experience in the banking sector, enabling rapid root cause analysis and precise technical communication with both technical and non-technical stakeholders.

CORE COMPETENCIES

• Merchant Onboarding & API Integration	• Incident Management & Troubleshooting	• Log Analysis & Root Cause Investigation
• Network Diagnostics (DNS, IP, HTTP/S)	• REST API Testing & Postman	• Back-Office Administration & Configuration
• Payment Processing Workflows	• Technical Documentation & FAQs	• Credential & Access Management
• SQL & PostgreSQL	• Agile / Scrum / Jira	• Stakeholder Communication

PROFESSIONAL EXPERIENCE

Embafinans | Business Analyst / Integration Support

2025 – Present | Baku, Azerbaijan

- Managed end-to-end API integration lifecycle for merchant partners, guiding them through technical onboarding via developer communication, test environment configuration, and comprehensive test case design and execution
- Coordinated with merchant development teams through direct communication channels to troubleshoot integration issues, validate API endpoints, and ensure seamless data exchange
- Executed full integration testing in test environments before authorizing production go-live, verifying payment transactions, error handling, and credential configurations
- Developed and maintained technical documentation including API integration guides, troubleshooting manuals, and FAQ resources for merchant self-service support
- Defined REST API specifications in Swagger/OpenAPI 3.0 and performed endpoint testing using Postman to validate request/response structures and error codes
- Administered back-office operations within internal systems, managing merchant credentials, configuration settings, and access permissions with strict security protocols
- Delivered 4 major fintech projects including BNPL Credit Scoring system (2x faster decisions) and B2C Payment Gateway (300–500 daily transactions)

Birbonus | Business Analyst / Merchant Integration

2024 – 2025 | Baku, Azerbaijan

- Onboarded partner merchants onto the loyalty bonus platform, providing hands-on technical support for API-based integration and payment configuration workflows
- Created detailed test cases and conducted integration testing to verify merchant transaction flows, bonus accumulation logic, and settlement processes
- Served as the primary technical point of contact for merchant partners, translating complex integration requirements into clear step-by-step guidance for non-technical stakeholders
- Managed merchant credentials, backend access permissions, and configuration settings within the platform admin panel

Umico | PostgreSQL Developer & L2 Support Specialist

2022 – 2024 | Baku, Azerbaijan

- Resolved L2 production incidents by analyzing system logs (ELK Stack), identifying root causes of transaction failures, and implementing fixes to restore service availability
- Utilized network diagnostic tools (ping, traceroute, nslookup) and HTTP/S protocol knowledge to troubleshoot connectivity issues between microservices and external APIs
- Administered PostgreSQL databases including query optimization, data migration, and performance monitoring for high-traffic e-commerce operations
- Provided technical support to partner development teams for API integration onboarding, including endpoint configuration, authentication setup, and error resolution
- Documented recurring issues and solutions in knowledge base articles to streamline incident resolution and enable L1 support team self-service

TECHNICAL FOUNDATION

Central Bank of Azerbaijan & Unibank | Software Engineer

15+ years of engineering experience in the banking and financial services sector, specializing in payment processing systems, secure transaction handling, and data protection protocols. Built and maintained core banking applications using C#/.NET, Oracle, MSSQL, and PostgreSQL. Deep understanding of DNS, IP addressing, HTTP/S protocols, and cybersecurity principles as applied to financial systems. This foundation enables rapid diagnosis of technical issues in payment ecosystems.

EDUCATION

Baku State University — Bachelor of Science in Applied Mathematics

Relevant coursework: Discrete Mathematics, Algorithms & Data Structures, Database Systems, Probability & Statistics, Mathematical Modeling
