

ZAMIR JAMALOV

IT Business Analyst | Risk Modeling & Scoring
+994 55 207 7228 | jamalov.zamir@gmail.com | Baku, Azerbaijan

PROFILE SUMMARY

Business Analyst with 2+ years in fintech credit scoring and real-time decision engine implementation. Defined scoring strategies, multi-stage credit decision logic, and cut-off boundaries for a custom-built lending platform. Monitored model stability via PSI and score distribution analysis. Engineering background enables precise translation of risk logic into developer-ready specifications.

CORE SKILLS

Risk & Scoring:

Credit Scoring | Real-Time Decision Engine | Multi-Stage Cut-off Design | Scorecard Matrices | Additive Point-Based Scorecard | PSI Monitoring | Score Distribution Analysis | Champion-Challenger Testing | Decision Audit Trail | Antifraud Rules

Technical:

SQL (Advanced Analysis) | Python (pandas, NumPy, regression) | REST API & JSON | Swagger / OpenAPI 3.0 | SOAP / XML | Oracle / PostgreSQL

Business Analysis:

BRD / FRD / SRS | User Stories (Gherkin) | BPMN (As-Is / To-Be) | Data Mapping | Gap Analysis | Use Case | RICE Prioritization

Languages:

Azerbaijani (Native) | Russian (Fluent) | English (Professional / Technical Docs)

PROFESSIONAL EXPERIENCE

Embafinans | IT Business Analyst

2025 - Present

Real-Time Decision Engine - Credit Decisioning Framework

- Defined a multi-stage credit decisioning framework executed at loan application time: Stage 1 - local data checks; Stage 2 - ASAN Personal Info (age, identity); Stage 3 - ASAN Finance (employment, workplace); Stage 4 - AKB Score (bureau score, stop-factors); Stage 5 - AKB History (overdue days, credit load); Stage 6 - ASAN Pension Info; each stage applies its own cut-off thresholds to pass, reject, or route to next stage
- Established three-way decision routing: Auto-Approve (all stages passed with sufficient score), Auto-Reject (hard stop-factor triggered at any stage), Expert Review (borderline profile routed to Loan Officer with full decision audit trail)

Scoring Model Design & Additive Scorecard

- Configured scoring matrices across 6 data sources (ASAN Personal Info, ASAN Finance, ASAN Pension Info, SIMA, AKB Score, AKB History); defined score-to-decision mapping with segment-specific cut-off boundaries
- Built additive point-based scorecard: mapped AKB history attributes (payment trend, overdue days, utilization) to calibrated point adjustments overlaid on bureau base score to derive internal risk score
- Performed quantitative analysis on AKB History variables: payment regularity, loan amount distribution, and credit card utilization computed via natural logarithm normalization

Scoring Model Monitoring & Rule Lifecycle

- Monitored model stability via PSI (Population Stability Index) and score distribution shifts; tracked approval/rejection ratios monthly and flagged deviations for risk team recalibration
- Analyzed cut-off efficiency by comparing actual vs. expected pass rates per stage; supported data-driven cut-off boundary adjustments
- Managed rule lifecycle: versioned rule changes, coordinated champion-challenger testing for new cut-offs against production baseline, and maintained rollback readiness
- Controlled data quality: defined missing-value policies, outlier thresholds, and null-handling rules for each scoring input source

Antifraud & Pre-Disbursement Screening

- Structured antifraud detection rules within decision engine: velocity checks (rapid repeat applications), data consistency validation across sources, and behavioral pattern flags for identity verification
- Designed BRD/FRD/SRS with end-to-end requirements traceability; prepared Swagger specs; coordinated UAT with bug triage

Birbonus | IT Business Analyst

2024 - 2025

- Designed a customer loyalty bonus system with earning rules, eligibility criteria, and partner settlement workflows; prepared BRD and API specs

Umico | PostgreSQL Developer & L2 Support

2022 - 2024

- PostgreSQL backend development; L2 production incident resolution via ELK Stack; API integration onboarding for partner teams

TECHNICAL FOUNDATION

PL/SQL backend developer; participated in core banking system development (general ledger, chart of accounts, credit lifecycle). 15+ years across Central Bank of Azerbaijan, Unibank, and ASAN Service covering C# backend, Oracle / PostgreSQL / MongoDB, and CI/CD pipelines.

TRAINING & EDUCATION

Innab Training Center | Corporate Data Analytics Trainer

Delivered Python data analytics training for Bank of Baku and SOCAR Upstream; focus on descriptive/diagnostic analysis, hypothesis testing, and regression modeling.

Baku State University - BS in Applied Mathematics
