

ZAMIR JAMALOV

Business Analyst | Credit Scoring & Decision Engine

Baku, Azerbaijan | +994 50 123 45 67 | zamir.jamalov@email.com | linkedin.com/in/zamirjamalov

PROFESSIONAL SUMMARY

Results-driven Business Analyst with 5+ years of experience in financial technology, specializing in credit scoring, decision engine optimization, and risk assessment frameworks. Proven track record of designing and configuring multi-priority cut-off rule engines, integrating external data sources (ASAN Finans, AKB Credit Bureau), and translating complex business requirements into actionable BRD/FRD specifications. Skilled in agile methodologies, stakeholder management, and cross-functional collaboration between IT and business teams.

WORK EXPERIENCE

Embafinans (Non-Bank Credit Organization)

Senior Business Analyst - Credit Scoring & Decision Engine | 2020 - Present

- Credit Scoring & Decision Engine Design:** Designed and maintained a 6-priority auto-decisioning cut-off framework with 30+ rules progressively filtering loan applications: internal blacklist screening, external data enrichment, credit bureau scoring, credit history analysis, income validation, and combined risk assessment.
- Score Matrix Configuration:** Configured scoring matrices by integrating data from multiple external services (ASAN Finans personal data, SIMA personal information, AKB score, AKB credit history). Analyzed score distributions over time and reconfigured weight parameters to optimize approval/rejection balance and minimize default risk.
- Hybrid Scoring Model:** Developed a hybrid scoring approach combining external AKB credit bureau score with company-internal risk score, enabling more granular applicant segmentation. Formulated personalized credit decision logic tailored to individual applicant risk profiles.
- Credit History Analytics:** Performed quantitative analysis on AKB credit history data to calculate customer payment behavior metrics: calendar-based payment regularity tracking, loan amount distribution analysis, and credit card utilization patterns computed using natural logarithm-based normalization methods.
- Rule Engine Optimization:** Continuously analyzed decision outcomes and rule hit rates to identify bottlenecks, refined cut-off thresholds, and introduced cooling-off period logic (3/15/90-day windows) for declined applicants to balance risk control and approval conversion.
- BRD/FRD & Stakeholder Management:** Documented business and functional requirements for scoring rule changes, coordinated with IT development teams for UAT testing, and presented analysis findings and recommendations to management stakeholders.

Previous Roles

IT Support Specialist / Business Analyst | 2016 - 2020

- Provided IT support and business analysis services across financial sector projects.
- Collaborated with cross-functional teams to gather requirements and improve operational workflows.
- Gained foundational experience in SQL querying, data analysis, and process documentation.

KEY COMPETENCIES

Credit Scoring & Risk Assessment	Decision Engine / Rule Engine Design	BRD / FRD / SRS Documentation
SQL & Data Analysis	BPMN Process Modeling	Agile / Scrum Methodology
UAT Testing & Coordination	Stakeholder Management	API Integration Requirements
Quantitative Risk Modeling	Credit Bureau Data Analysis	Cross-functional Team Collaboration

EDUCATION

Bachelor's Degree - Information Technology / Business Administration

LANGUAGES

Azerbaijani (Native) | English (B1 - Intermediate) | Russian (Fluent)

CERTIFICATIONS & TOOLS

SQL, MS Excel (Advanced), Jira, Confluence, Visio / Draw.io (BPMN), Postman (API Testing)
